RE: IC - 3396

This is in response to your letters of September 5, 1990, November 13, 1990 and July 23, 1992 requesting that Forms C 34425413, 34425397, and 34425405, corresponding to three amylopectin products, be added to the TSCA Chemical Substance Inventory. In 1987 (IC - 1789), the Chemical Inventory Section (CIS) concluded that for the purpose of Inventory clarity, regular corn starch and waxy corn starch (amylopectin) would require separate Inventory listings. If the submitter of an original Inventory Form had reported a starch product but had instead actually manufactured an amylopectin product, the Agency would allow the submitter to submit an Inventory correction. The Agency also allowed a submitter of an original Inventory Form for a starch (or amylopectin) product to add a new Inventory Form for the amylopectin (or starch) product, if they had been manufacturing both at the time the original reporting form was submitted.

You have also requested at this time a correction to the TSCA Inventory listing of the chemical substance identified by Form C 33184078. Forms C 34425504 (for the starch product) and C 34425512 (for the corresponding amylopectin product) will replace Form C 33184078.

As you explained in your letters, you were manufacturing both the starch and amylopectin products at the time the reporting forms for the starch products were submitted. Therefore, the original Inventory Forms submitted for the corresponding starch products (Form B 20361614, line 6, Form C 33184086, and Form B 21527379, line 4) will not be deleted from the Inventory. Only the incorrectly reported substance, i.e., Form C 33184078 may be a candidate for delisting from the Inventory if it has not been reported by another company.

CONCURRENCES

SYMBOL	TS-793	TS-793						
SURNAME	MATTA	Can						
DATE	8/4/92	8/4/92						

The Agency has reviewed the new forms that you submitted and decided to accept the substances for inclusion in the TSCA Inventory. Forms C 34425512, 34425504, 34425413, 34425397, and 34425405 are being forwarded to our contractor, Chemical Abstracts Service (CAS), for processing and inclusion in the Master Inventory File. We anticipate that the processing of the form will be completed in approximately six to eight weeks. If you wish to know the status of your submission at that time, please direct your inquiry to the address listed below.

For future correspondence regarding this matter, please reference Inventory Correspondence Number IC-3396 and address your letter to:

Chemical Inventory Section (TS-790)  
U.S. Environmental Protection Agency  
Office of Pollution Prevention and Toxics  
401 M Street, S.W.  
Washington, D.C. 20460

Sincerely,

Henry P. Lau, Chief  
Chemical Inventory Section
